

## Revit Essentials - Remote

### Course Aim

Autodesk Revit provides delegates with the tools to design, build and maintain high-quality and energy efficient buildings. It supports BIM workflows and offers comprehensive features to help construction projects.

### Who Should Attend?

The course is ideal for delegates who want to develop practical skills in Revit and understand BIM workflows, including:

- Architects and building designers
- Structural engineers
- General users who will be working with Revit

No prior Revit experience is required, though a basic understanding of construction principles is helpful. The course works well for beginners or those looking to refresh and enhance their skills.

For delegates using Revit for Mechanical, Electrical or Plumbing, it is covered in our [Revit Essentials - All Disciplines course](#).

### Course Duration

This is a 3 day course

### Agenda

The Revit Essentials - Remote course combines theory and hands-on practice, giving delegates the skills to take a project from concept to completion, including design, analysis, documentation and visualisation.

During the course delegates will:

- Learn key Revit concepts and workflows through clear demonstrations by our expert trainers
- Practice techniques step-by-step on a computer running Revit
- Complete practical exercises and create files that you can take away for future reference
- Have plenty of opportunity to ask questions and receive guidance throughout the course

### Certification

Delegates who complete the course will receive an Autodesk-accredited e-certificate, confirming successful completion of an accredited Revit Essentials course. The e-certificate is valid indefinitely.
